It looks like you're working in United Kingdom of Great Britain and Northern Ireland. Is that right?

Yes
No
SSAB - Climate Change 2018

C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

1. SSAB is a highly-specialized global steel company driven by close customer relationships. SSAB develops high-strength steels and provides services for better performance and sustainability. The company is a leading producer on the global market for Advanced High-Strength Steels (AHSS) and Quenched & Tempered Steels (Q&T), strip, plate and tubular products, as well as construction solutions. SSAB’s steels and services help to make end products lighter and increase their strength and lifespan. SSAB is structured across three steel divisions: SSAB Special Steels, SSAB Europe and SSAB Americas, and two subsidiaries: Tibnor and Ruukki Construction. SSAB Special Steels – Global steel and service partner in Quenched & Tempered Steels (Q&T) and Advanced High-Strength Steels (AHSS). SSAB Europe – Leading Nordic-based steel producer of high-quality strip, plate and tube products. SSAB Americas – Market-leading North American producer of quality steel plate and coil. Tibnor – Leading Nordic distributor of steel and non-ferrous metals. Ruukki Construction – European provider of energy-efficient building and construction solutions. SSAB has a cost-efficient and flexible production system. SSAB’s production plants in Sweden, Finland and the US have an annual steel production capacity of 8.8 million tonnes. The company also has capacity to process and finish various steel products in China, Brazil and many other countries. In Sweden and Finland, production is integrated into a blast furnace process. In the US, electric arc furnaces are used for a scrap-based production process. In 2017, SSAB had annual net sales of SEK 66 billion and at the end of the year around 15,000 employees in over 50 countries. SSAB is listed on Nasdaq OMX Stockholm (Large cap list) and has a secondary listing on Nasdaq OMX Helsinki.

C0.2

(C0.2) State the start and end date of the year for which you are reporting data.

<table>
<thead>
<tr>
<th>Start date</th>
<th>End date</th>
<th>Indicate if you are providing emissions data for past reporting years</th>
<th>Select the number of past reporting years you will be providing emissions data for</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;Not Applicable&gt;</td>
<td>&lt;Not Applicable&gt;</td>
<td>&lt;Not Applicable&gt;</td>
<td>&lt;Not Applicable&gt;</td>
</tr>
</tbody>
</table>

C0.3

(C0.3) Select the countries/regions for which you will be supplying data.

Finland
Lithuania
Poland
Russian Federation
Sweden
C0.4

(C0.4) Select the currency used for all financial information disclosed throughout your response.
SEK

C0.5

(C0.5) Select the option that describes the reporting boundary for which climate-related impacts on your business are being reported. Note that this option should align with your consolidation approach to your Scope 1 and Scope 2 greenhouse gas inventory.
Operational control

C-ST0.7

(C-ST0.7) Which parts of the steel value chain does your organization operate in?
Coke oven operation
Blast furnace and basic oxygen furnace operations
Electric arc furnace operations
Hot-rolling
Cold rolling and finishing
Scrap steel recycling

C1. Governance

C1.1

(C1.1) Is there board-level oversight of climate-related issues within your organization?
Yes

C1.1a

(C1.1a) Identify the position(s) of the individual(s) on the board with responsibility for climate-related issues.

<table>
<thead>
<tr>
<th>Position of individual(s)</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Board/Executive board</td>
<td>In the case of SSAB the supervisory board collectively has the responsibility for sustainability related matters. It has been deemed important to delegate to a single individual. Also, in line with EU and Swedish legislation, the sustainability report is signed by the board. The chief executives of SSAB are not members of the supervisory board, but form the group executive committee. Please refer the question 1.2</td>
</tr>
</tbody>
</table>

C1.1b
C1.1b

Provide further details on the board’s oversight of climate-related issues.

<table>
<thead>
<tr>
<th>Frequency with which climate-related issues are a scheduled agenda item</th>
<th>Governance mechanisms into which climate-related issues are integrated</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheduled – some meetings</td>
<td>Reviewing and guiding strategy&lt;br&gt;Reviewing and guiding major plans of action&lt;br&gt;Reviewing and guiding risk management policies&lt;br&gt;Reviewing and guiding annual budgets&lt;br&gt;Reviewing and guiding business plans&lt;br&gt;Setting performance objectives&lt;br&gt;Monitoring implementation and performance of objectives&lt;br&gt;Overseeing major capital expenditures, acquisitions and divestitures&lt;br&gt;Monitoring and overseeing progress against goals and targets for addressing climate-related issues</td>
<td>SSAB’s board reviews company’s sustainability strategy annually. Board also reviews the implementation and the performance of objectives quarterly. All major plans and actions, like the implementation of HYBRIT project aiming to fossil carbon free steel making, are reviewed and approved by the board.</td>
</tr>
</tbody>
</table>

C1.2

(C1.2) Below board-level, provide the highest-level management position(s) or committee(s) with responsibility for climate-related issues.

<table>
<thead>
<tr>
<th>Name of the position(s) and/or committee(s)</th>
<th>Responsibility</th>
<th>Frequency of reporting to the board on climate-related issues</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chief Executive Officer (CEO)</td>
<td>Both assessing and managing climate-related risks and opportunities</td>
<td>Quarterly</td>
</tr>
<tr>
<td>Other C-Suite Officer, please specify ( ● Chief Technology Officer (CTO))</td>
<td>Both assessing and managing climate-related risks and opportunities ▪ Reviewing and guiding major plans of action</td>
<td>Quarterly</td>
</tr>
</tbody>
</table>

C1.2a

(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored.

At the moment SSAB’s Executive Vice President and Head of Communication, HR & Sustainability is responsible for coordinating and driving sustainability work at the Group level. She is a member of the Group Executive Committee and reports directly to the President & CEO of SSAB. However, SSAB has decided to further strengthen the sustainability management by recruiting a dedicated Executive Vice President, Sustainability.

SSAB’s Executive Vice President and Head of Technical Development has the responsibility for the environmental issues (including climate change).

Sustainability matters are frequently on SSAB’s Group Executive Committee’s agenda to ensure the close involvement of top management in important sustainability issues. Strategies and targets for environmental impact and climate
SSAB's Sustainability Management Team is a group level team led by VP Sustainability and Public Affairs (reporting to Executive Vice President and Head of Communication, HR & Sustainability) The team creates a network of expertise within critical sustainability areas, with the responsibility to coordinate and drive SSAB’s sustainability initiatives. Each member of the Sustainability Management Team works closely with the relevant people across the organization to ensure the involvement of key experts and divisional representation in sustainability work. To support work related to environmental issues, SSAB has an Environmental Council. The Council is chaired by SSAB’s Head of Environmental Affairs, who is also a member of the Sustainability Management Team. In issues related to responsible sourcing, the Vice President and Head of Ethics and Compliance works together with the procurement organization and the Chief Procurement Officer

---

### C1.3

**(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?**  
Yes

### C1.3a

**C1.3a) Provide further details on the incentives provided for the management of climate-related issues.**

<table>
<thead>
<tr>
<th>Who is entitled to benefit from these incentives?</th>
<th>Chief Sustainability Officer (CSO)</th>
</tr>
</thead>
<tbody>
<tr>

<th>Energy manager</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Types of incentives</strong></td>
<td>Monetary reward</td>
</tr>
<tr>
<td><strong>Activity incentivized</strong></td>
<td>Emissions reduction target</td>
</tr>
</tbody>
</table>

**Comment**

For environmental /energy/sustainable managers bonus targets include climate change issues, when appropriate, depending on the responsibilities and tasks of the manager. In 2015, SSAB launched the following environmental targets until 2019: 1) A lasting reduction of 200,000 tonnes in CO2 emissions 2) A lasting reduction of 300 GWh in purchased energy (electricity and fuels) 3) A lasting improvement of 30,000 tonnes in residual utilization The base year for monitoring the targets is 2014. However, since these targets were met already in 2017, new targets were set so that by the end of 2020 SSAB has achieved a lasting reduction of 300,000 tonnes in CO2 emissions, a lasting reduction of 400 GWh in purchased energy and a lasting improvement of 50,000 tonnes in residuals utilization.

| Who is entitled to benefit from these incentives? | Environmental, health, and safety manager |
Activity incentivized
Other, please specify (Emissions reduction projects and targets)

Comment

(C2.2) Select the option that best describes how your organization's processes for identifying, assessing, and managing climate-related issues are integrated into your overall risk management.

Integrated into multi-disciplinary company-wide risk identification, assessment, and management processes

(C2.2a) Select the options that best describe your organization's frequency and time horizon for identifying and assessing climate-related risks.

<table>
<thead>
<tr>
<th>Frequency of monitoring</th>
<th>How far into the future are risks considered?</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Annually</td>
<td>&gt;6 years</td>
<td>All areas where SSAB has manufacturing are considered in the risk assessment. The frequency of the assessment might vary between sites. Group-wide the process is carried through annually</td>
</tr>
</tbody>
</table>

(C2.2b) Provide further details on your organization’s process(es) for identifying and assessing climate-related risks.

At SSAB, risk management is integrated in the annual strategy process and includes the involvement of the Group Executive Committee, the Audit Committee and the Board of Directors. Risk management aims at supporting the achievement of SSAB’s strategies and targets and at ensuring business continuity. Hence, good risk management includes providing important input to the company’s strategy process. Risk mitigation activities are also an important part of a company’s risk management process. By ranking the risks in order of risk value proper priorities can be given and proactive measures taken. Risk transparency is achieved by using a common format, which is necessary in order to present an overall understanding of the risks the company is exposed to. At the Group level a common risk classification criteria is used. Each division and Group function is responsible for assessing the most important risks in their areas. This means that most of the Group’s operational risks are managed by each division, but coordinated at higher level where deemed necessary. The Group Legal function has a global risk management function, which assesses the insurable risks. Management of financial risks is mainly handled by the Group’s treasury function. Sustainability risks are identified by the Sustainability Management Team and coordinated centrally as part of the sustainability strategy process. In addition, risk management related to energy and the environmental issues is mainly managed on a site level in day-to-day operations. All SSAB production sites are certified according to ISO 14001, in which risks are addressed. Being certified also means that all our sites have been audited by a third party. SSAB has had an internal audit unit which, among other things, identifies risk areas and, based on a risk analysis, conducts internal reviews, which are followed by recommendations for improvements within these areas. The internal audit unit reports directly to the Audit Committee.
operations risks, employee/people risks and financial risks. The risk level of a certain risk is calculated based on the estimated impact and likelihood (probability) level of risk occurrence based on a specific classification system. This is done for all major risks that have been reported by divisions and global functions in the strategy process. After the risk level estimation, risks are placed on a risk map, where the major risks are identified and prioritized, and if needed, action plans are developed. This is done at both divisional and Group levels. Risks concerning climate change are a prioritized area for SSAB and there are action plans at Group level, including group-wide targets for reducing CO2 emissions and purchased energy, as well as at local site level through continuous work concerning significant environmental aspects and ISO 14001 certification. SSAB is supporting the UN SDG to mitigate climate change and its impacts.

C2.2c

(C2.2c) Which of the following risk types are considered in your organization’s climate-related risk assessments?

<table>
<thead>
<tr>
<th>Risk Type</th>
<th>Relevance &amp; Inclusion</th>
<th>Please Explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current regulation</td>
<td>Relevant, always included</td>
<td>Regulatory demands are the starting point when assessing climate-related risks.</td>
</tr>
<tr>
<td>Emerging regulation</td>
<td>Relevant, always included</td>
<td>As far as emerging regulatory demands are known, they are taken into account when making the risk assessment.</td>
</tr>
<tr>
<td>Technology</td>
<td>Relevant, always included</td>
<td>SSAB is on the forefront of developing breakthrough technologies for steelmaking. The progress of which is taken into account when assessing risks.</td>
</tr>
<tr>
<td>Legal</td>
<td>Relevant, always included</td>
<td>Legal demands are taken into account in the same way as current and emerging regulations.</td>
</tr>
<tr>
<td>Market</td>
<td>Relevant, always included</td>
<td>Market demands are increasingly focusing on climate-related risks, which is relevant in product development and other areas.</td>
</tr>
<tr>
<td>Reputation</td>
<td>Relevant, always included</td>
<td>Reputational risk is related to the previous categories and is part of the overall assessment.</td>
</tr>
<tr>
<td>Acute physical</td>
<td>Relevant, sometimes included</td>
<td>Severe weather conditions, for example, could be relevant for some SSAB sites, but not for all.</td>
</tr>
<tr>
<td>Chronic physical</td>
<td>Relevant, sometimes included</td>
<td>Shift in climate is evaluated as part of the overall risk assessment.</td>
</tr>
<tr>
<td>Upstream</td>
<td>Relevant, sometimes included</td>
<td>Risks involving main suppliers are identified.</td>
</tr>
<tr>
<td>Downstream</td>
<td>Relevant, sometimes included</td>
<td>Downstream (i.e. customer) risks are evaluated with a risk-based approach, i.e. human rights are evaluated for identified regions/industries.</td>
</tr>
</tbody>
</table>

C2.2d

(C2.2d) Describe your process(es) for managing climate-related risks and opportunities.

At SSAB, risk management is integrated in the annual strategy process and includes the involvement of the Group Executive Committee, the Audit Committee and the Board of Directors. Risk management aims at supporting the achievement of SSAB’s strategies and targets and at ensuring business continuity. Hence, good risk management includes providing important input to the company’s strategy process. Risk mitigation activities are also an important part of a company’s risk management process. By ranking the risks in order of risk value proper priorities can be given and proactive measures taken. Risk transparency is achieved by using a common format, which is necessary in order to present an overall understanding of the risks the company is exposed to. At the Group level a common risk classification criteria is used. Each division and Group function is responsible for assessing the most important risks in their areas. This means that most of the Group’s operational risks are managed by each division, but coordinated at higher level where deemed necessary. The Group Legal function has a global risk management function, which assesses the insurable risks. Management of financial risks is mainly handled by the Group’s treasury function.
Sustainability risks are identified by the Sustainability Management Team and coordinated centrally as part of the sustainability strategy process. In addition, risk management related to energy and the environmental issues is mainly managed on a site level in day-to-day operations. All SSAB production sites are certified according to ISO 14001, in which risks are addressed. Being certified also means that all our sites have been audited by a third party. SSAB has had an internal audit unit which, among other things, identifies risk areas and, based on a risk analysis, conducts internal reviews, which are followed by recommendations for improvements within these areas. The internal audit unit reports directly to the Audit Committee.

Examples of different risks that are considered are both external and internal. Examples of external risks include market risks, industry risks, regulatory and financial risks. Examples of internal risks are sales/customer risks, operations risks, employee/people risks and financial risks. The risk level of a certain risk is calculated based on the estimated impact and likelihood (probability) level of risk occurrence based on a specific classification system. This is done for all major risks that have been reported by divisions and global functions in the strategy process. After the risk level estimation, risks are placed on a risk map, where the major risks are identified and prioritized, and if needed, action plans are developed. This is done at both divisional and Group levels. Risks concerning climate change are a prioritized area for SSAB and there are action plans at Group level, including group-wide targets for reducing CO2 emissions and purchased energy, as well as at local site level through continuous work concerning significant environmental aspects and ISO 14001 certification. SSAB is supporting the UN SDG to mitigate climate change and its impacts.

C2.3

(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes

C2.3a

(C2.3a) Provide details of risks identified with the potential to have a substantive financial or strategic impact on your business.

Yes

C3.1c

(C.3.1c) Explain how climate-related issues are integrated into your business objectives and strategy.

SSAB's strategy is based on comprehensive analysis of the global trends and drivers that affect our operating environment. Sustainability and climate change are topics considered in the strategy process as part of the analysis of risks and opportunities and have influenced SSAB's short and long-term strategy. SSAB's "Taking the Lead" strategy, first introduced in 2012, continues to drive the strategic decisions and actions of the company. SSAB's vision – a stronger, lighter and more sustainable world – paves the way forward.

In 2015, we launched a new sustainability strategy that supports the overall SSAB strategy with three focus areas – sustainable offering, sustainable operations and responsible partner. The core of SSAB's business is to develop and produce Advanced High-Strength Steels (AHSS) and Quenched and Tempered Steels (Q&T) that are stronger than ordinary steels. This in turn helps our customers to produce lighter and stronger products, thus reducing their environmental footprint. This is SSAB's most important contribution to mitigating climate change. (Please refer to the SSAB EcoUpgraded initiative www.ssab.com/ecoupgraded)

SSAB focuses on operational efficiency to ensure our operations are as sustainable as possible. SSAB works for continuous improvements to minimize emissions, aiming for material and energy efficiency. ii. Regulatory changes, especially regulations related to EU-ETS, have increased the need for more CO2 efficient production and influence investment decisions. Environmental aspects are always taken into consideration when planning production investments.

Climate change creates opportunities for SSAB to develop profitable, green business and gain a better competitive position versus its competitors. The regulations that put pressure on our customers to improve their end products' material, energy and fuel efficiency, and/or to extend service life, are important drivers for SSAB's growth strategy in high-strength and wear steels. SSAB's steels offer the possibility to build lighter end-products with a longer lifecycle in a way that reduces component wear and lowers fuel consumption, increases lifting performance and enables higher payloads. SSAB's subsidiary Ruukki Construction operates both in the residential and non-residential construction segments. Energy efficiency is a growing trend in both segments. Greener, smarter solutions are increasing in popularity and environmental transparency is becoming a norm in the building industry. iii. Sustainability has been a part of SSAB's long-term strategy for several years. In May 2015, SSAB launched a new sustainability strategy with the three focus areas (see earlier). Renewed environmental targets relate to a reduction in CO2 emissions, energy usage and waste to be achieved by 2019. SSAB's objective is to become one of the world's most sustainable steel companies. Climate change is one of the main drivers for SSAB's strategy in high-strength steels and wear steels (like described above). As part of this, Research & Development (R&D) continues to be a high priority. This entails further development in three areas: Product development, boosting SSAB's own high-strength offering with new products. SSAB's R&D is focused primarily on high-strength steels and wear steels, with an emphasis on segments where requirements on the steel are critical. Increased environmental awareness has been a driving force, as evidenced by SSAB's high-strength steels that enable e.g. more energy-efficient transportation and lower CO2 emissions. Knowledge of production processes and efficient use of resources is also important in SSAB's R&D. Process development at the mills, enabling more efficient, cost-effective and sustainable production. SSAB's steelmaking process has been continuously improved to become extremely efficient. As a result, SSAB's blast furnaces...
heating, gas, slag and dust, are recovered to minimize the consumption of purchased energy and generation of waste. Using recycled steel in steel production saves natural resources, which leads to lower CO2 emissions. In SSAB's scrap based production in the US, CO2 emissions are substantially lower than those generated in conjunction with iron ore-based steel production. Application development to help customers to upgrade to high-strength steels as early as possible in the development of a new product – be it a tipper, a dumper or a crane – SSAB's engineers support the customer in developing solutions that best utilize the qualities of each steel grade. This is how SSAB enables customers to produce stronger, lighter and more durable end-products. SSAB's unique competitive edge in high-strength and wear steels lies in one of the widest product and service portfolios on the market, leading brands combined with deep knowledge of steel properties and close collaboration with customers in developing new steel applications. SSAB is well positioned to take advantage of opportunities in high-strength steels, which help to differentiate SSAB in the steel market. Customers are also increasingly looking at their steel suppliers' performance in environmental issues, and having extremely CO2 efficient production processes is a strong competitive advantage for SSAB. In 2016 SSAB, LKAB and Vattenfall have announced a joint initiative to develop a steel production process that uses hydrogen instead of coal as a reducing agent and emits water instead of carbon dioxide. This will be ready for commercial operation some time after 2035. Although the current SSAB blast furnace based production system is one of the most CO2 efficient in the world, it is still a significant source of CO2 emissions. To address the root cause of these CO2 emissions, the three companies are driving a common initiative to replace carbon and coke with hydrogen in the iron making process. This would mean that the emissions would not be CO2 – but water.

### C4.5

**Do you classify any of your existing goods and/or services as low-carbon products or do they enable a third party to avoid GHG emissions?**

Yes

### C4.5a

**Provide details of your products and/or services that you classify as low-carbon products or that enable a third party to avoid GHG emissions.**

**Level of aggregation**

Company-wide

**Description of product/Group of products**

Our entire product portfolio offers positive environmental values relative to the steel market as a whole thanks to our effective iron and steel production. SSAB is one of the best in the world in iron-ore based steel making when it comes to CO2 efficiency – 7% better than the European average, based on benchmark done by Stahl-Zentrum regarding
2017 SSAB emitted 9.8 million tonnes of CO2 globally, 9.1 million tonnes of which was related to iron-ore based steel production in the Nordics and 0.7 million tonnes to scrap-based steel production in the US. In 2017, SSAB produced 8.0 million tonnes of crude steel globally, which means an average of 1.2 tonnes of CO2 emissions per produced tonne of steel. In iron-ore based steel production, SSAB produced 5.6 million tonnes of crude steel.

**Are these low-carbon product(s) or do they enable avoided emissions?**

Avoided emissions

Other, please specify (Benchmark)

**% revenue from low carbon product(s) in the reporting year**

**Comment**

**Level of aggregation**

Group of products

**Description of product/Group of products**

As described, we have very efficient iron and steel production. However, the major potential will be seen when we look at the benefits of our special steels from a lifecycle perspective including the use-phase of the end-products, for example, the use of high-strength steels and wear plate in active constructions such as cars, trucks, trailers etc. In these applications, we often see an environmental benefit that exceeds the environmental impact from steel production. Case study – use of high-strength steels: This case illustrates a hypothetical scenario where one million tonnes of high-strength steels replace 1.3 million tonnes of standard steel used in vehicles. (Source: Jernkontoret, the environmental research program “the steel eco-cycle”, calculated based on the average lifespan of the European vehicle fleet.) When upgrading to high-strength steel, the application retains its performance even though less steel is being used. This results in weight savings for the steel application, which in turn means that less steel needs to be produced, thus fewer resources are needed. In the use phase, high-strength steels used in vehicles can provide environmental benefits because they lower vehicle weight, cut fuel consumption and thus result in less CO2 emissions. Around 90% of the reduced environmental impact can be related to the use phase of lighter vehicles through reduced fuel consumption. From a lifecycle perspective, this case shows the large savings that can be achieved using high-strength steels. A). When 300,000 tonnes less steel need to be produced, indirect CO2 emissions from upstream suppliers will decrease by 200,000 tonnes because less energy and raw materials are needed. B). A reduction of 300,000 tonnes in steel produced results in 500,000 tonnes less direct CO2 emissions from SSAB’s steel production. C). Upgrading vehicles to high-strength steels results in 7.3 million tonnes less CO2 emissions in the use phase. D). The total CO2 savings out of this hypothetical case are around 8 million tonnes.

**Are these low-carbon product(s) or do they enable avoided emissions?**

Low-carbon product

**Taxonomy, project or methodology used to classify product(s) as low-carbon or to calculate avoided emissions**

C5.1

(C5.1) Provide your base year and base year emissions (Scopes 1 and 2).

Scope 1

Base year start
January 1 2017

Base year end
January 1 2018

Base year emissions (metric tons CO2e)
9834158

Comment

Scope 2 (location-based)

Base year start
January 1 2017

Base year end
January 1 2018

Base year emissions (metric tons CO2e)
534814

Comment

Scope 2 (market-based)

Base year start
January 1 2017

Base year end
January 1 2018

Base year emissions (metric tons CO2e)
340814

Comment

C5.2

(C5.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate Scope 1 and Scope 2 emissions.

European Union Emission Trading System (EU ETS): The Monitoring and Reporting Regulation (MMR) – General guidance for installations
US EPA Mandatory Greenhouse Gas Reporting Rule
World Steel Association CO2 emissions data collection guidelines

C6. Emissions data
What were your organization's gross global Scope 1 emissions in metric tons CO2e?

Gross global Scope 1 emissions (metric tons CO2e)
10424208
End-year of reporting period
<Not Applicable>
Comment
We report according to World Steel methodology. We want to highlight that for SSAB's plant in Luleå we also include the emissions from the powerplant jointly owned by SSAB and municipality of Luleå, by doing that SSAB reports all emissions coming from the steel making process in this survey.

C6.2

Describe your organization's approach to reporting Scope 2 emissions.

Scope 2, location-based
We are reporting a Scope 2, location-based figure

Scope 2, market-based
We are reporting a Scope 2, market-based figure

Comment

What were your organization's gross global Scope 2 emissions in metric tons CO2e?

Scope 2, location-based
534814
Scope 2, market-based (if applicable)
343426
End-year of reporting period
<Not Applicable>

Comment

Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?
No
(C6.5) Account for your organization’s Scope 3 emissions, disclosing and explaining any exclusions.

**Purchased goods and services**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
1826501

**Emissions calculation methodology**
For raw material emission factors is taken from ?. Scope 3 emissions is then calculated by formula (Purchased units*emission factor)= Scope 3 emission For purchased goods and services emission factors is taken from 2012 Guidelines to Defra / DECC’s GHG Conversion Factors for Company Reporting, Annex 13 - Indirect emissions from the supply chain, table 13 (2009). CO2e emissions is calculated by formula (Purchased value*emission factor)= Scope 3 emission

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
87

**Explanation**
The calculation is made according to GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard by consultans companie Gaia Consultant OY. All assumptions and methodological differences are recorded.

**Capital goods**

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**
0

**Emissions calculation methodology**

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**
SSAB is a production company and we judge that the largest reduction of CO2 emissions is made when our high strength or high wear steel is used to make products like capital goods. Hence, we have not yet calculated the emissions from capital goods

**Fuel-and-energy-related activities (not included in Scope 1 or 2)**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
184531

**Emissions calculation methodology**
For fuel and energy related activities emission factors is taken from 2017 Guidelines to Defra / DECC’s GHG Conversion Factors for Company Reporting. CO2e emissions is calculated by formula (relevant purchased units * relevant emission factor)= Scope 3 CO2e emission

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
100

**Explanation**

**Upstream transportation and distribution**

**Evaluation status**
Relevant, calculated
**Emissions calculation methodology**
For upstream transportation and distribution emission factors is taken from 2017 Guidelines to Defra / DECC’s GHG Conversion Factors for Company Reporting. CO2e emissions is calculated by formula (relevant purchased units * relevant emission factor)= Scope 3 CO2e emission

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
100

**Explanation**

**Waste generated in operations**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
50649

**Emissions calculation methodology**
Emison factors is taken from DEFRA 2017: Commercial and industrial waste - landfilled and from DEFRA 2017: Commercial and industrial waste - combustion Waste volume/weight is taken from internal data collection CO2e emissions is calculated by formula (relevant purchased units * relevant emission factor)= Scope 3 CO2e emission CO2e emissions is calculated by formula (relevant purchased units * relevant emission factor)= Scope 3 CO2e emission

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
100

**Explanation**

**Business travel**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
6831

**Emissions calculation methodology**
All business traveling in SSAB is controlled by a travel agency. The travel agency make a yearly report on our scope 3 emissions based on travel distances with train and by air. Scope 3 CO2e emissions is calculated by travel agency.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
100

**Explanation**

**Employee commuting**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
35953

**Emissions calculation methodology**
Scope 3 emissions from employee commuting is calculated by using number of employees times an average travel distances. Share, average distance and number of trips are defaults taken from WBCSD’s guidance for chemical sector

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**

**Upstream leased assets**
Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
Emissions calculation methodology
Percentage of emissions calculated using data obtained from suppliers or value chain partners

Explanation
In SSAB’s annual report 2017, assets are listed, but the impact on CO2 emissions of these assets are not evaluated.

Downstream transportation and distribution

Evaluation status
Relevant, not yet calculated

Metric tonnes CO2e
Emissions calculation methodology
Percentage of emissions calculated using data obtained from suppliers or value chain partners

Explanation
The transportation of products primarily takes place on railway and ship, but also by truck. Today, there is not sufficient data available for transported km’s in the Nordic countries. Compared with the production of steel plates from SSAB, the amount of carbon dioxide emissions from processing them, by e.g. cutting, bending and welding, are estimated as very small.

Processing of sold products

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
Emissions calculation methodology
Percentage of emissions calculated using data obtained from suppliers or value chain partners

Explanation
Compared with the production of steel plates from SSAB, the amount of carbon dioxide emissions from processing them, by e.g. cutting, bending and welding, are estimated as very small.

Use of sold products

Evaluation status
Relevant, not yet calculated

Metric tonnes CO2e
Emissions calculation methodology
Percentage of emissions calculated using data obtained from suppliers or value chain partners

Explanation
The emissions connected to product use has been calculated by an external consultancy firm, Gaia consulting. (See attached report in question 10.1.b page 20.) However, the result of calculation does not yet have

End of life treatment of sold products

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
Emissions calculation methodology
Percentage of emissions calculated using data obtained from suppliers or value chain partners

Explanation
Steel is the most circulated material in the world, after lifetime ends all steel becomes raw material for production of steel.
Downstream leased assets

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**

**Emissions calculation methodology**
Percentage of emissions calculated using data obtained from suppliers or value chain partners

**Explanation**

Franchises

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**

**Emissions calculation methodology**
Percentage of emissions calculated using data obtained from suppliers or value chain partners

**Explanation**
SSAB does not have any franchise business

Investments

**Evaluation status**
Not evaluated

**Metric tonnes CO2e**

**Emissions calculation methodology**
Percentage of emissions calculated using data obtained from suppliers or value chain partners

**Explanation**
There is no possibility today to calculate how SSAB's investments in equipment etc. afects scope 3 emissions, however, those emissions is anyway minor compared to the one from our operations

Other (upstream)

**Evaluation status**
Please select

**Metric tonnes CO2e**

**Emissions calculation methodology**
Percentage of emissions calculated using data obtained from suppliers or value chain partners

**Explanation**

Other (downstream)

**Evaluation status**

**Metric tonnes CO2e**

**Emissions calculation methodology**
Percentage of emissions calculated using data obtained from suppliers or value chain partners

**Explanation**
(C6.7) Are carbon dioxide emissions from biologically sequestered carbon relevant to your organization?
No

(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure
0.00016213

Metric numerator (Gross global combined Scope 1 and 2 emissions)
10709787

Metric denominator
unit total revenue

Metric denominator: Unit total
66059000000

Scope 2 figure used
Market-based

% change from previous year
20.5

Direction of change
Decreased

Reason for change

Reason for change
Carbon reduction targets Energy efficiency targets
(C-ST6.14) State your organization's emissions and energy intensities by steel production process route.

**Process route**
Blast furnace- basic oxygen furnace

**Emissions intensity figure, metric tons CO2e per metric ton of crude steel production**

**Energy intensity figure, GJ (LHV) per metric ton of crude steel production**

**Methodology applied**
Worldsteel Association

**Comment**
This question regards information that is of a sensitive nature. SSAB continuously works to improve its performance in this area. However, the details on the progress in this specific field would reveal details on SSAB strategy and performance improvement that could, potentially, influence the priorities and strategies of competing companies in a manner that is not desirable, nor compliant with SSAB information policy. It would also raise issues with information disclosure and stock market regulations. For this reason, SSAB has arrived at the conclusion that these questions cannot be answered. To reinstate and maintain the CDP policy to focus on companywide, aggregated, numbers, is highly desired and strongly recommended.

C9. Additional metrics

C9.1

(C9.1) Provide any additional climate-related metrics relevant to your business.

Description
Energy use

Metric value
304
Metric numerator
GWh

Metric denominator (intensity metric only)

% change from previous year
87

Direction of change
Increased

Please explain
SSAB has a target to reduce its use of purchased energy by 400 GWh by 2020, compared to base year 2014. The 2017 value was 304 GWh, compared to 162 GWh in 2016.

Description
Waste

Metric value
39000

Metric numerator
tonnes

Metric denominator (intensity metric only)

% change from previous year
8

Direction of change
Increased

Please explain
SSAB has a target to achieve a lasting improvement of 50,000 tonnes in residual utilization by 2020. The 2017 value was 39,000 tonnes, compared to 36,000 tonnes in 2016.

C10.2

(C10.2) Do you verify any climate-related information reported in your CDP disclosure other than the emissions figures reported in C6.1, C6.3, and C6.5?

Please select
C11.1

(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?
Yes

C11.1a

(C11.1a) Select the carbon pricing regulation(s) which impacts your operations.
EU ETS

C11.1b

(C11.1b) Complete the following table for each of the emissions trading systems in which you participate.

EU ETS

| % of Scope 1 emissions covered by the ETS | 93 |
| Period start date | January 1 2017 |
| Period end date | December 31 2017 |
| Allowances allocated | 8562500 |
| Allowances purchased | 0 |
| Verified emissions in metric tons CO2e | 9134695 |
| Details of ownership | Facilities we own and operate |
| Comment | |

C11.1d

(C11.1d) What is your strategy for complying with the systems in which you participate or anticipate participating?

SSAB’s strategy to minimize environmental impact and CO2 emissions is in line with the objectives of the ETS. To reduce CO2 emissions several short and midterm measures have been identified and initiated to reach our goal of reducing CO2 emissions by 200 000 tons by 2019; this includes more efficient operations and switching from fuels, such as oil and propane, to LNG, among others. At the same time it should be pointed out that the main part (over 90%) of the SSAB CO2 emissions are process related, i.e. an intrinsic part of the current technology of converting iron ore to iron. In this process SSAB is at the forefront of the current technology and very close to the theoretical limit of what is possible with today’s technology. To further reduce process related CO2 emissions a major leap in technology is
used to reduce iron ore to iron, resulting in only water as by-product. This technology has currently only been proven in laboratory scale, and the milestone target is to have a demonstration plant commissioned by 2025. Read more at http://www.hybritdevelopment.com

C11.2

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?
No

C11.3

(C11.3) Does your organization use an internal price on carbon?
Yes

C11.3a

(C11.3a) Provide details of how your organization uses an internal price on carbon.

Objective for implementing an internal carbon price
Change internal behavior
Drive energy efficiency
Drive low-carbon investment
Stress test investments

GHG Scope
Scope 1
Scope 2

Application
SSAB Group (all units)

Actual price(s) used (Currency /metric ton)
14.86

Variance of price(s) used
Projected EUA prices

Type of internal carbon price
Other, please specify (Investment payback calculations)

Impact & implication
SSAB uses internal prices of carbon dioxide when making investment calculations and forecasts of our economic performance. The price depends on the actual European price of allowances (EUA) and an evaluation of the different sources of price forecasts. Price is important when deciding if and where we should invest

C12. Engagement
(C12.1) Do you engage with your value chain on climate-related issues?
Yes, our suppliers
Yes, our customers

(C12.1a) Provide details of your climate-related supplier engagement strategy.

<table>

**Rationale for the coverage of your engagement**
HYBRIT is a joint venture company, owned by three companies SSAB, LKAB and Vattenfall, that aims to be the first in the world to develop an industrial process for fossil-free, ore-based steel production. The project was initiated in spring 2016 and the goal is to have an industrial process in place by 2035.

**Impact of engagement, including measures of success**
HYBRIT has the potential to reduce Sweden's total carbon dioxide emissions by ten per cent, and Finland's by seven per cent. HYBRIT also has global potential to reduce carbon dioxide emissions. This historical technological shift has been described as crucial if Sweden is going to be able to achieve the goals set out in the Paris Agreement. By starting to build the pilot plant, where we'll develop and scale up the technology for fossil-free steel production, we're taking an important step forward towards SSAB's goal of being fossil-free by 2045. We're proud of being part of an important and challenging technological shift that can result in our solving part of the climate issue.

**Rationale for the coverage of your engagement**
We collaborate with several suppliers with a broad approach to find more efficient solutions that increase the sustainability in the business. Suppliers Responsible sourcing SSAB has thousands of suppliers all over the world. The input materials used to make iron and steel account for SSAB’s most significant purchases. Suppliers must comply both with SSAB’s own policies and with international social and environmental guidelines. Efficient and responsible sourcing of goods and services SSAB has an extensive supply chain including around 20,000 suppliers, active in more than 60 countries. However, measured by supplier spend, more than half of our purchases come from
and the strategies for this depend on the products or services purchased. Since the supply chain is global, it is important to evaluate supplier risks and their ability to address social and environmental issues. At SSAB, sustainability is an integrated aspect of sourcing operations and supply chain management. Suppliers must abide by SSAB’s Code of Conduct as part of the terms and conditions of their contracts. Stringent quality requirements and long-term business relations provide the sourcing organization with a good insight into conditions at suppliers. We assess suppliers on the basis of quality, delivery reliability, cost and sustainability. Read more at http://www.ssab.com/company/sustainability/responsible-partner/responsibility-in-the-supply-chain

C12.1b

(C12.1b) Give details of your climate-related engagement strategy with your customers.

Type of engagement
Collaboration & innovation

Details of engagement
Other – please provide information in column 5

Size of engagement

% Scope 3 emissions as reported in C6.5

Please explain the rationale for selecting this group of customers and scope of engagement

Impact of engagement, including measures of success

SSAB’s sustainable offering is our external value proposition, what we offer our customers and other stakeholders. The core of SSAB’s business is to develop and produce Advanced High-Strength Steels (AHSS) and Quenched and Tempered Steels (Q&T) that are stronger than ordinary steels, which in turn helps our customers to produce lighter and stronger products, thus reducing their environmental footprint. SSAB’s specialist in Knowledge Service Center or Tech Service helps our costumer to take full advantage of our Advanced High-Strength Steels (AHSS) and Quenched and Tempered Steels (Q&T) that are stronger than ordinary steels and therefor gives lighter, more durable or more efficient products resulting in decreased CO2 emissions. Read more at http://www.ssab.com/support/design-and-development-support. SSAB arrange every year the "Swedish Steel Prize" event: http://www.steelprize.com/. "The Swedish Steel Prize could be awarded to any product in which high-strength structural steel, wear plate or tool steel (the term high-strength steel is used in this text to denote also extra high-strength steel and ultra high strength steel) has contributed to an innovative design, which gives clear benefits. This may relate, for example, to new design features, lighter products, simplified production, longer life time, improved performance and beneficial environmental effects." The products and constructions saves carbon dioxide emissions compared to the alternatives. SSAB has launched a concept called EcoUpgraded which aims to identify applications that show promise for reducing CO2 emissions during use. Looking at each specific application, SSAB can compare the potential CO2 savings in its use phase to the CO2 emitted during production, thereby identifying products that would benefit the most from an upgrade to high-strength steel. Read more https://www.ssab.com/company/sustainability/sustainable-offering/eco upgraded

C12.3

(C12.3) Do you engage in activities that could either directly or indirectly influence public policy on climate-related issues through any of the following?

Direct engagement with policy makers
Trade associations
Funding research organizations
### C12.3a

**On what issues have you been engaging directly with policy makers?**

<tbody>
<tr>
<td>Cap and trade</td>
<td>Support with minor exceptions</td>
<td>SSAB participated directly in EU decision making process both at member state and EU level by discussing mostly with Swedish and Finnish government members and parliamentarians</td>
<td>As part of the steel industry SSAB realizes that climate change is a critical issue that urgently needs to be addressed, and fully supports the efforts to reduce the European CO2 emissions through the ETS system. To make this as efficient as possible, the current EU ETS should not have a cross-sectional correction factor for manufacturers and the benchmarks should be achievable by 10% of the best performers. Full off-setting of the indirect costs (CO2 cost pass-through in electricity prices) at the level of the most efficient installations should be applied consistently in all member states. Comprehensive international agreement on emission reductions is vital for a level playing field in the industry. While the steel industry supports the EU's measures to effectively combat climate change, the Commission proposal in 2015 to review the EU ETS may not deliver the needed level of protection for our sector against carbon and investment leakage.</td>

### C12.3b

**Are you on the board of any trade associations or do you provide funding beyond membership?**

Yes

### C12.3c

**Enter the details of those trade associations that are likely to take a position on climate change legislation.**

**Trade association**

- Eurofer

**Is your position on climate change consistent with theirs?**

Consistent

**Please explain the trade association's position**

Current EU ETS should not have cross-sectional correction factor for manufacturers and the benchmarks should be achievable by 10% of the best performers. Comprehensive international agreement on emission reductions is vital for industrial level-playing-field. While steel industry supports the EU's measures to effectively combat climate change, the Commission proposal 2015 on the review of the EU ETS may not deliver the needed level of protection for our sector against carbon and investment leakage.
How have you, or are you attempting to, influence the position?

SSAB’s CEO is a member of the Eurofer Vice Presidents, which is the highest decision making body of the organization. SSAB is represented in various Committees and Working Groups of Eurofer. SSAB an active role in the decision making bodies of the federation.

Trade association
Jernkontoret

Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association’s position
Current EU ETS should not have cross-sectional correction factor for manufacturers and the benchmarks should be achievable by 10% of the best performers. SSAB is represented in Committees and Working Groups of the association of Finnish Metal Producers. SSAB an active role in the decision making bodies of the association.

Trade association
worldsteel

Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association’s position
Climate change is the biggest issue for the steel industry in the 21st century. The worldsteel Climate Action Recognition Programme recognizes steel producers that have fulfilled their commitment to participate in the worldsteel CO2 emissions data collection programme.

How have you, or are you attempting to, influence the position?
SSAB is represented in the decision making bodies of the association.

Trade association
National Association of Manufacturers

Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association’s position
NAM opposes any federal or state government actions regarding climate change that could adversely affect the international competitiveness of the U.S. marketplace economy. Any climate change policies should focus on cost-effective reductions, be implemented in concert with all major emitting nations, and take into account all greenhouse sources and sinks.
C12.3d

(C12.3d) Do you publicly disclose a list of all research organizations that you fund?
No

C12.3f

(C12.3f) What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?

In line with the SSAB sustainability strategy that was launched in 2015, SSAB places an even stronger focus on managing and coordinating sustainability and corporate responsibility-related issues on Group level. In the current organization, the EVP for HR & Sustainability reports directly to the CEO. To ensure Group-wide collaboration, a Sustainability Management Team has been formed. The team is chaired by Vice President, Sustainability and Public Affairs. The members of the team create a network of expertise having the responsibility of coordinating SSAB’s sustainability initiatives on Group level. Decisions related to the strategic direction of SSAB’s sustainability work are made by the Group Executive Committee. Each member of the Sustainability Management Team is responsible for including relevant employees throughout the organization to ensure the involvement of key experts and divisional representation. In order to ensure that all direct and indirect activities that influence policy are consistent with overall climate change strategy both Managers for Environmental Affairs as well as Public Affairs are members of the Sustainability Team.

C12.4

(C12.4) Have you published information about your organization’s response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).
